SUBJECT INDEX TO VOLUME 7

Alternating-direction finite-element method, 471
Analytic function method, linking complex variable boundary-element method to, 235
Annulus of varying cross section, heat transfer and fluid flow characteristics for, 285

Boiling flow, two-fluid model equations of, and simultaneous nonlinear equations, 225

Change-of-phase heat transfer, one-dimensional, finite-element/Green's function embedding technique applied to, 241
Complex variable boundary-element method linked to analytic function method, 235
Conjugated problem of separated compressible flow and conductive solid body, 395
Convection-diffusion equation, test problems for, and locally analytic differencing scheme, 165
Convection-diffusion problems in irregular domains, finite-difference solutions of, using a nonorthogonal coordinate transformation, 183
Convective heating at the solid-liquid interface, 17

Diffusion equation, multigrid techniques for the numerical solution of, 251

Embedding technique, finite-element/Green's function, 241

Finite-difference solution of full Navier-Stokes and energy equations between concentric spheres, 103
Finite-difference solutions:
of convection-diffusion problems in irregular domains, 183
for heat transfer in a roll rotating at high speed, 113
Finite-element/Green's function technique applied to one-dimensional change-of-phase heat transfer, 241
Finite-element method, alternating-direction, applied to change-of-phase problems, 471
Finite-element technique, inverse, to determine change-of-phase interface location in one-dimensional melting problems, 269
Fixed bed, fluid flow and heat transfer at edge of, 429
Fluid flow and heat transfer, modeling of, at edge of fixed bed, 429
Fluid flows, incompressible, enhancements of the SIMPLE method for predicting, 147
Free convection about a vertical cylinder in a porous medium, 483
Furnace, numerical study of thermal processes in, 211

Heat transfer and fluid flow characteristics for annulus of periodically varying cross section, 285
Horizontal cylinder with long transverse plate fins, 319

Laminar flow and heat transfer of air in an in-line tube bank, 89
Laminar fluid convection between concentric and eccentric heated rotating cylinders, 77
Laminar free convection around an isothermal sphere, 103
Locally analytic differencing scheme applied to problems for convection-diffusion equation, 165

Mixed convection boundary-layer flow along vertical surface in porous medium, 305
Multigrid scheme for thermohydraulic flow, 375
Multigrid techniques for numerical solution of diffusion equation, 251

Natural convection heat transfer, conjugate three-dimensional, from horizontal cylinder with long transverse plate fins, 319

Natural convection in rectangular cavity, effect of wall conduction and radiation on, 449
Nonlinear equations, simultaneous, solution of, and application to two-fluid model equations of boiling flow, 225
Nonstaggered grids, use with primitive-variable formulations, 413
Numerical algorithm conjugating separated compressible flow, 395
Numerical method for solution of simultaneous nonlinear equations and application to two-fluid model equations of boiling flow, 225
Numerical solution scheme, implicit/explicit, for phase-change problems, 1
Numerical study of thermal processes in a furnace, 211

One-dimensional melting problems, change of phase interface location in, 269

Patankar-Spalding method, entrainment rate, initial values, transverse velocity for, 39
Phase-change problems, implicit/explicit numerical solution scheme for, 1
Planar freezing with solid-solid transitions, 17
Porous medium, mixed convection boundary-layer flow along vertical surface in, 305
Primitive-variable formulations, 413

Radial freezing with solid-solid transitions, 17
Reynolds-stress turbulence closure, numerical study of separating and reattaching flow using, 343
Rotating axisymmetric body, turbulent separated flows behind, 359
Rotating cylinders, heated, concentric and eccentric, numerical experiments with laminar fluid convection between, 77

Separating and reattaching flow, numerical study of, using Reynolds-stress turbulence closure, 343
SIMPLE method, enhancements of, for predicting incompressible fluid flows, 147

Theoretical and experimental study of turbulent separated flows behind rotating axisymmetric body, 359
Thermohydraulic flow, multigrid scheme for, 483
Three-dimensional numerical method based on superposition principle, 127
Turbulence near-wall model and application to separated and reattached flows, 59
Turbulent separated flows behind a rotating axisymmetric body, 359

Vertical cylinder in a porous medium, free convection about, influence of injection or withdrawal of fluid on, 483

Wall conduction and radiation, effect of, on natural convection in rectangular cavity, 449
